

Course 09 — AI Passive Income System

A 6-modules CyberG7 system — research-backed, build-as-you-go.

THE COURSE AT A GLANCE

The anti-hype, system-first passive income course: a 90-day, AI-compressed playbook that does the revenue math first, validates before you build, grows the list while you create, and ends in a real evergreen funnel — positioned against both six-month pre-AI course advice and overnight get-rich-quick schemes.

Who This Is For

The anti-hype, system-first passive income course: a 90-day, AI-compressed playbook that does the revenue math first, validates before you build, grows the list while you create, and ends in a real evergreen funnel — positioned against both six-month pre-AI course advice and overnight get-rich-quick schemes.

This course is built for:

- Experts, coaches, and freelancers who want to package their knowledge into a course but feel stuck on where to start
- Burned-out service providers trading hours for dollars who want to build an asset instead of more client work
- Aspiring solopreneurs and side-hustlers who want a part-time, AI-assisted path to recurring digital income
- Existing creators with an audience who haven't yet monetized with a validated, evergreen product

You'll feel right at home if any of these sound familiar:

- Exhausted from trading time for money with no scalable asset to show for it
- Building courses no one buys because they skipped revenue math and topic validation
- Overwhelmed by the production grind — scripting, recording, editing, slides, sales pages
- Launching to silence because the email list was an afterthought, not built during creation

What You'll Build

By the end, you won't just understand the ideas — you'll have assembled a working system, module by module. Across the course you'll develop:

- The Passive Income Equation
- The L6 Framework — Six Levers of a Lazy Income System
- The Five-Layer AI Creator Stack
- The Lazy Creator Mindset — Assets vs. Hours
- The AI-Compressed 90-Day Roadmap
- The Completion Agreement
- Core Takeaways
- Glossary
- The 5-Step AI Niche Framework

Course Outline

Module 1 · Income Architecture: Revenue Math, the AI Creator Stack, and the Asset Mindset

Passive income is not luck — it is a system that begins with architecture, not action. Before you build anything, you reverse-engineer a clear revenue equation, assemble the right AI tool stack, and make the mental shift from working for money to building assets that work while you sleep. This module installs the foundations: the math that sets your targets, the L6 framework that sequences the whole journey, the five-layer AI creator stack, the lazy-creator asset mindset, a compressed 90-day roadmap, and a completion agreement that separates builders from browsers.

Key themes:

- The Passive Income Equation
- The L6 Framework — Six Levers of a Lazy Income System
- The Five-Layer AI Creator Stack

Module 2 · Profitable Idea Machine: AI Niche Selection, Validation, and Curriculum Architecture

A profitable course topic is not one you find — it is one you validate. AI can compress weeks of market research into hours, but only if you feed it the right inputs: your expertise, your audience's pain, and the gap between what already exists and what your ideal student desperately needs. This module turns broad expertise into a precise niche, builds a research-grade student avatar, runs a 24-hour go/no-go validation, names the course, and architects a transformation-arc curriculum.

Key themes:

- The 5-Step AI Niche Framework
- The Unicorn Avatar — Seven-Dimension Research
- Three-Gate Market Validation in 24 Hours

Module 3 · Audience-First Flywheel: Build the Email List and Lead Magnet While You Create

The single biggest mistake first-time creators make is waiting until the course is finished to start building an audience. The Audience-First Flywheel reverses this: you cultivate your email list during the creation phase so launch day meets a warm audience, not silence. This module builds the AI-designed lead magnet, sets up ConvertKit, writes a converting landing page, runs a three-channel promotional plan, establishes a visual brand identity, and opens the course platform before the content is finished.

Key themes:

- Lead Magnet Strategy
- ConvertKit for the Lazy Creator
- Landing Page Mastery

Module 4 · Course Production the Lazy Way: AI Scripting, Batch Recording, and One-Day Upload

Course production is not the bottleneck most creators think it is — the real bottleneck is starting without a script, recording without a structure, and editing without a system. AI eliminates all three by handing you a complete production brief before you press record. This module scripts lessons in 30 minutes, designs branded slides in under two hours, sets up a lazy recording rig, applies an 80/20 edit, builds completion-driving worksheets, and gets the school live in one day.

Key themes:

- AI Lesson Scripting
- Slide Design in Canva
- The Lazy Creator Recording Setup

Module 5 · The Money Machine: Value-Based Pricing, the AI Sales Page, and a 10-Day Launch

A course without a sales system is a product without a store. The money machine has three pillars: a sales page that converts cold visitors, a price that communicates value rather than apologizing for it, and a launch sequence that creates urgency without manipulation. This module sets value-based pricing, writes a trust-building brand story, drafts an AI sales page in one afternoon, builds a 10-day launch email playbook, positions the course with a differentiation statement, and maximizes revenue with bumps, upsells, and pay-over-time.

Key themes:

- Value-Based Pricing
- Your Brand Story
- The AI Sales Page

Module 6 · Scale and Repeat: The Evergreen Funnel, Affiliates, and the Passive Income Ladder

A course launch is a spike; an evergreen funnel is a river. The final lever of the system converts a one-time launch into automated, compounding passive income by connecting list growth to an always-on sales sequence, an affiliate channel that sells without you, and a product ladder that grows revenue per customer. This module debriefs the launch data, builds the evergreen funnel, recruits

affiliates, retains students into social proof, designs the product ladder, and uses data to double the next launch.

Key themes:

- The Post-Launch Debrief
- The Evergreen Funnel
- Affiliate Partnerships

Outcomes

Complete the course and you'll be able to:

- Run the passive income equation: goal divided by price equals sales; sales times 50 equals list-size target — write both numbers down as your two North Star metrics.
- Run the five-step niche framework with AI and write your niche statement using the avatar/outcome/timeframe/obstacle formula.
- Choose a lead magnet format, run the AI creation prompt, design the cover in Canva, and export it as a PDF before recording a single lesson.
- Script all six lessons of your first module in one two-hour AI session using the six-element prompt, then add one personal story per lesson.
- Run the value-based pricing formula — outcome, 12-month value, then price at 10/15/20% — and lock the middle figure without revisiting it.
- Complete the six-question post-launch analysis within 48 hours of close and write one optimization decision per question.
